These PowerPoint documents have been made available by DEQ Office of Training Services for study purposes only. Exam questions will not be derived from the PowerPoints. PowerPoint documents will not be allowed into the exam. This presentation is current as of 06.14.2016

Module 8

Evaluating Water Quantity Compliance

Module 8. Content

8a. Effective CNs (review)

8b. Routing vs. CN Adjustment

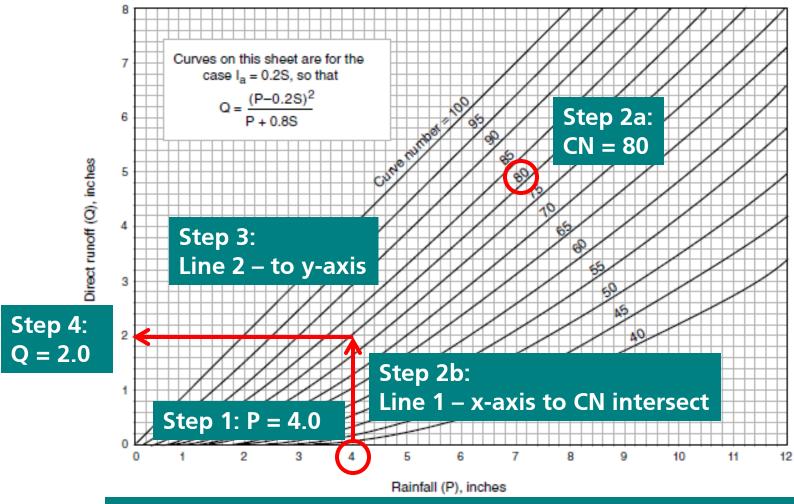

8c. Enhancing Storage at Practices 8d.

Traditional CNs

8e. Rational Method (review)

Review – *Graphical Solution*

Given a watershed with a CN of 80, what would be the direct runoff (Q) from a rainfall (P) of 4.0 inches?

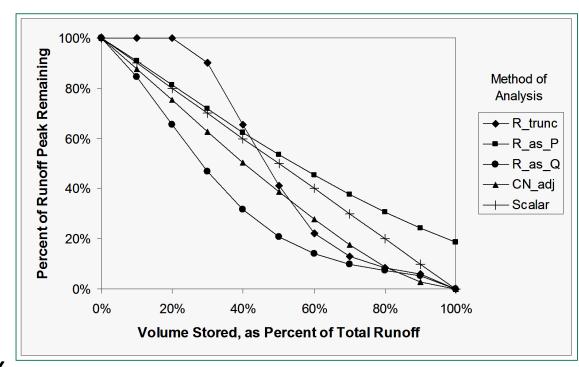

Review - Tabular Solution

										Step	_				
		Runoff depth for curve number of— CN = 80													
Rainfall	40	45	50	55	60	65	70	75	80	85	90	95	98

Why are CN Adjustments Useful?

 Simplified view of small storage amounts distributed on landscape

Minimize complex modeling

Excerpted from work by Paul R. Koch, Ph.D., P.E.

8b. | Practice Routing versus CN Adjustment | Pg. 4

How Does the Spreadsheet Determine (retention) Storage?

Residual volume from upstream BMP contributes to next BMP in treatment train for sizing

Practice	on of Credit	Credit	Credit Area (acres)	Volume from Upstream RR Practice (cf)	Runoff Reduction (cf)	Remaining Runoff Volume (cf)	Phosphorus Efficiency (%)	Phosphorus Load from Upstream RR Practices (lbs)	Untreated Phosphorus Load to Practice (lbs.)	Phosphorus Removed By Practice (lbs.)		Downstream Treatment to be Employed
7.a. minuadon #1 (Opec #9)	plume reduction	0.50	0.00	0	0	0	25	0.00	0.00	0.00	0.00

What Does that Volume Mean?

- That volume is the estimated fraction of the runoff (annually) that is reduced
- Multiplied by a 1-inch rainfall

Practice	on of Credit	Credit	Credit Area (acres)	Volume from Upstream RR Practice (cf)	Runoff Reduction (cf)	Runoff	Phosphorus Efficiency (%)		Untreated Phosphorus Load to Practice (lbs.)		Phosphorus	Downstream Treatment to be Employed

What are the limitations?

- Storage-based practices
 - Volume often much smaller than actual storage provided
 - Designers may also customize storage characteristics to reduce flows
 (more than spreadsheet can account)

Bioretention Level 1 - Example

• Given:

- Level 1 bioretention
- B type soils
- 2 Acre DA (50% Imp, 50% Turf)

Sizing:

- -Tv = volume
- Surface area is 1 Tv divided by storage depth
- Storage depth ~ 1.4 ft. (typical)

Bioretention Level 1 - Example

• Size:

- -Tv = 4175 c.f.
- -SA = 4175/1.4 = 2982 s.f.

6. Bioretention								
6.a. Bioretention #1 or Urban Bioretention	impervious acres draining to bioretention	40% runoff volume reduction	0.40	1.00	0	1379	2069	25
(Spec #9)	turf acres draining to bioretention	40% runoff volume reduction	0.40	1.00	0	290	436	25

- -RR "Credit" = 1379 + 290 = 1669 c.f.
 - 40% of volume draining to facility

		Adjusted CN	75	77	77		

Interim Summary

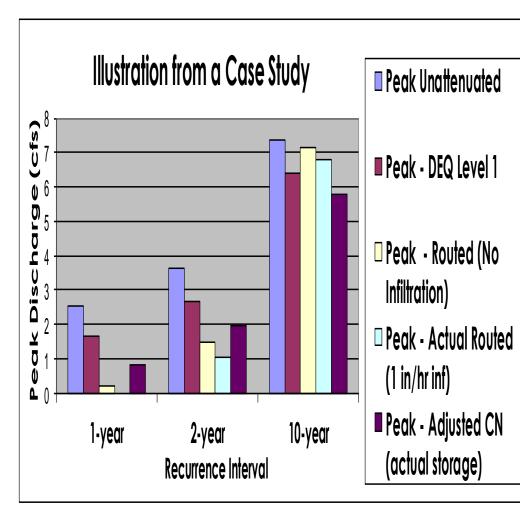

- Practice calculated to reduce:
 - 1 year storm volume 0.96 in to 0.73 in
 - For 2 acre catchment
 - $0.96 \times 2 \times 43,560/12 = 6,970 \text{ c.f.}$
 - $0.72 \times 2 \times 43,560/12 = 5,227 \text{ c.f.}$
- Given total runoff 1-yr = 6,970 c.f.
- Actual storage greater than 4,175 c.f.
- Credit is only 1,669 c.f.

So what does this mean?

- Routed storage-based practices can generate much lower discharges than CN adjustment
- Expect designers to route practices
- CN Adjustment AND
 Routing for given practice not allowed.....

ALWAYS discount the routed practice from CN adjustments)

Storage Optimization

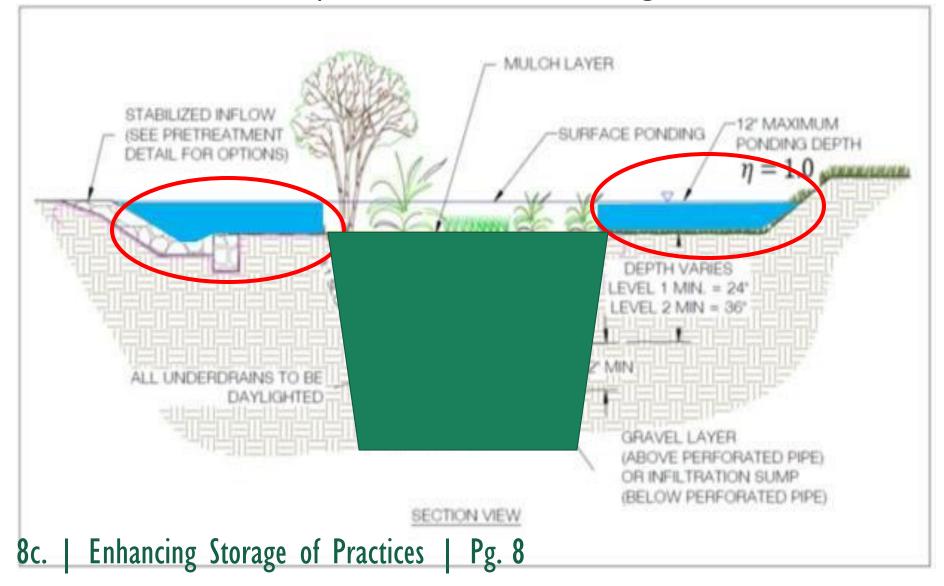

- Storage can be customized to reduce discharges for water quantity design
- Examples for bioretention customization include:
 - Increasing media thickness
 - Increasing sump depth
 - Increasing ancillary surface storage

Bioretention

VIRGINIA DEQ STORMWATER DESIGN SPECIFICATION No. 9

Optimization and Storage:

Curve Numbers (Spreadsheet vs Lookup Table)

- May see differences between spreadsheet CNs vs TR-55 CN Tables
- Either acceptable in designs
- Designers may use spreadsheet CNs
- Understand which CN you are dealing with and why

 Table 2-2a

Rational/Modified Rational

- Drainage areas ≤ 200 acres
 - VSMP authority can allow Rational Method for evaluating peak discharges
 - VSMP authority can allow Modified Rational Method for evaluating volumetric flows to stormwater conveyances

Rational/Modified Rational

- Drainage infrastructure sizing
- Sheet flow analysis
- How do you show SWM compliance?
 - No volume with Rational
 - No 24-hr hydrograph in Rational and Modified Rational

Questions?
